

BUI TRAN KHANH MINH

Address: Da Nang
Phone: 0935 421 647
Email: btrankhanhminh@gmail.com

SUMMARY

AI Engineer with hands-on experience building and training model AI, including Computer Vision models, AI Agents, and RAG-based LLM applications. Skilled in developing scalable AI backend services using Python, FastAPI, Django, Django REST Framework

EDUCATION

Da Nang University of Science and Education (UED)

July 2022 - July 2026

Major in Information of Technology. GPA: 3.21
Toeic: 640/990

SKILLS

Programming Languages: Python, JavaScript
Web Frameworks & Libraries: FastAPI, Django, Django REST Framework, React.js
AI & Machine Learning: Computer Vision, LangChain Ecosystem, PyTorch, LLM
API Database: MySQL, PostgreSQL
DevOps: Docker, Git

WORK EXPERIENCE

SOLBIZ SOLUTIONS :

Kimi CLI - AI Coding Agent (June 2026 – Present)

- Contributed to the development of a cross-platform AI coding agent CLI for Windows and Fedora Linux, ensuring consistent behavior across different operating systems.
- Studied and understood a large existing codebase to implement new features, fix issues, and integrate seamlessly with the project's architecture.
- Developed automated test cases using Pytest to verify CLI commands, API interactions, and streaming behavior, improving software reliability and preventing regressions.
- Worked with OpenAI-compatible APIs, understanding and extending existing implementations for system prompts, HTTP streaming, request/response processing, and request metrics.

Technologies

- **Languages:** Python
- **Networking:** aiohttp, HTTPX
- **AI & Machine Learning:** OpenAI-compatible APIs
- **Storage:** LevelDB (Plyvel)
- **Testing:** Pytest
- **Platform:** Windows, Fedora Linux, Ubuntu Linux

PROJECTS in SOLBIZ:

Face Recognition Attendance & HR Management System (Feb 2026 – June 2026)

- Developed backend APIs for employee management, department, leave requests, check-in/check-out, face verification, and attendance history.
- Implemented face verification flow with image upload, confidence score handling, and recognition history logging.
- Built check-in/check-out logic using GPS location, checkpoint validation, server time, and timezone information.
- Implemented background email sending using Redis and Celery for welcome emails and account-related notifications.
- Integrated frontend screens with backend APIs using Next.js, ReactJS, TypeScript, and Axios.
- Fixed issues related to authentication, tenant routing, API endpoints, SMTP email configuration, and input validation.
- Contributed to delivering the MVP earlier than planned.

Technologies

- **Backend:** Django, Django REST Framework + Redis (Email Queue)
- **AI Agent:** Face Recognition
- **Database:** PostgreSQL
- **Frontend:** NextJS, ReactJS, TypeScript
- **Other:** Geofencing, GPS

PROJECTS PERSONAL:

Acne Detection, Classification and Skin-care Recommendation System (Dec 2024 – Mar 2026)

- Prepared and processed image datasets for acne detection and classification. Trained and evaluated EFFICIENTNET model and YOLO models for type acnes object .
- Compared model performance using Confusion Matrix, Precision, Recall, mAP, confidence threshold and benchmark with Research article
- Built a prediction pipeline to detect acne areas and classify acne conditions from input images.
- Developed a RAG-based recommendation flow to suggest suitable skin-care solutions for users and applied prompt rewriting techniques to improve user queries production workflows.
- Implemented model evaluation, monitoring, and model versioning workflows for production AI systems.
- The classification model using EfficientNetV2B2 achieved about 90% accuracy and the object detection model achieved about 0.40 mAP@0.5, compared with 0.54 mAP@0.5 from a reference scientific paper.

Core Technologies: YOLO, Deep Learning, Computer Vision, RAG, LLM API, OpenCV, NumPy, Matplotlib, Hugging Face, Embedding Retrieval, FastAPI, ReactJS
